

ANALYSIS IN US IMMIGRATION: A DECADE SNAPSHOT (2011-2021)

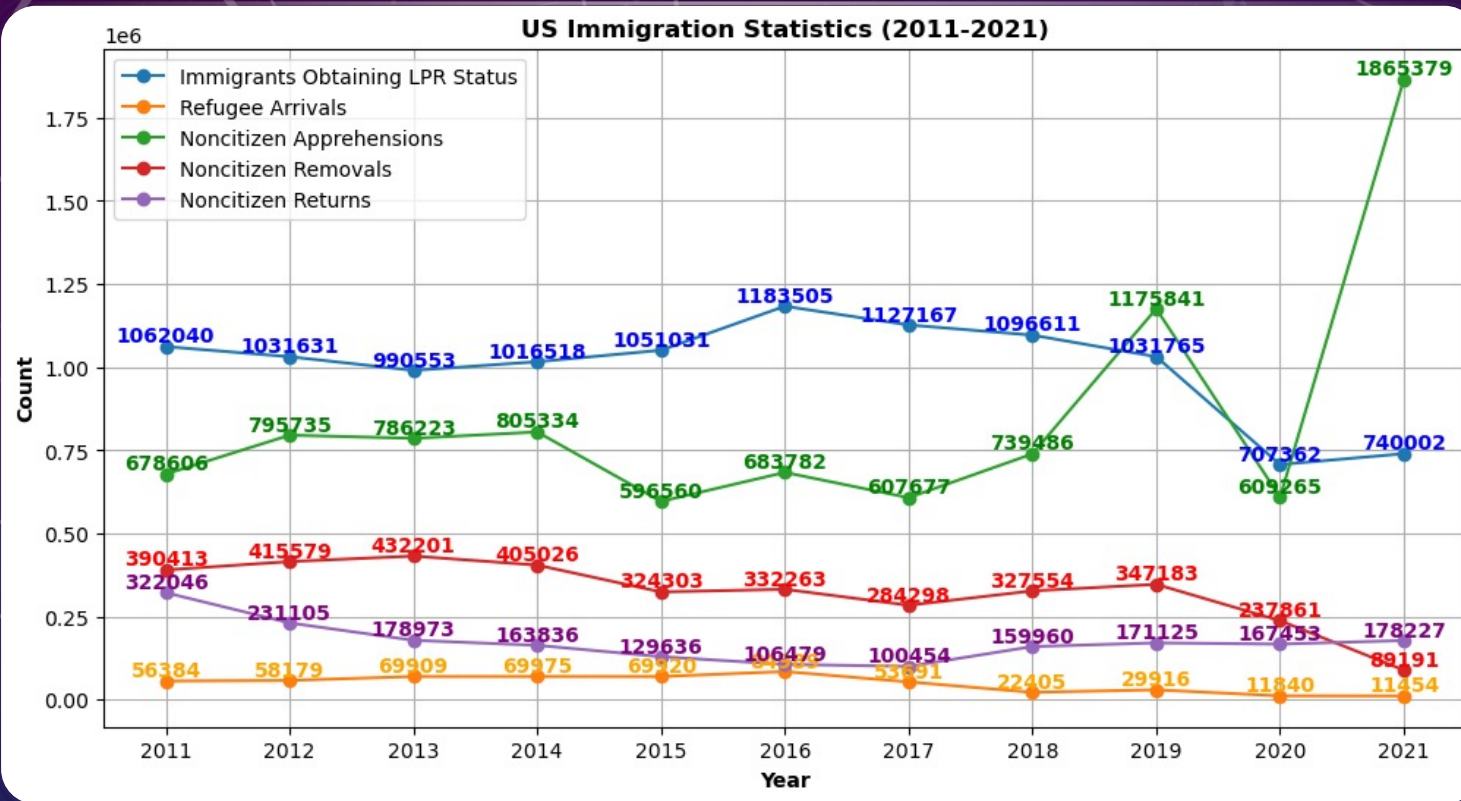

Figure 1: Line Plot, showing the US immigration trends in the decade
LPR = Lawful Permanent Resident

- **Noncitizen apprehensions** went up significantly in **2020**. The reason might be the data inclusions that related to the **COVID-19** pandemic.
- **Removals** dropped notably in **2020**. This could be related to the **increase in the noncitizen apprehensions** or a direct side effect of the **COVID-19** pandemic.
- The counts of noncitizen returns, noncitizen removals, and refugee arrivals have been relatively steady over the past 10 years. There is a recent decrease in the count of noncitizen removals likely due to the COVID-19 pandemic.

US Immigration Statistics: Percentage Stem Plot from 2011 to 2021

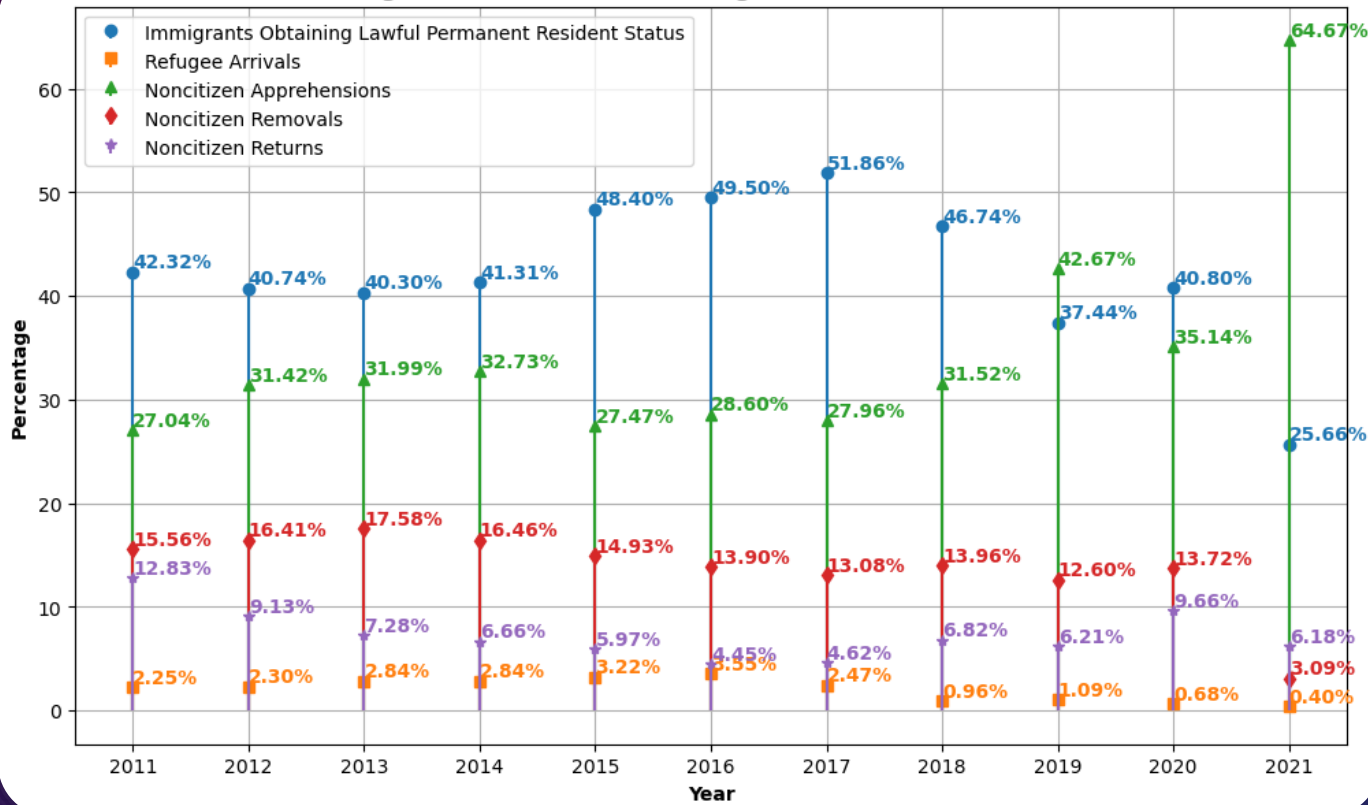

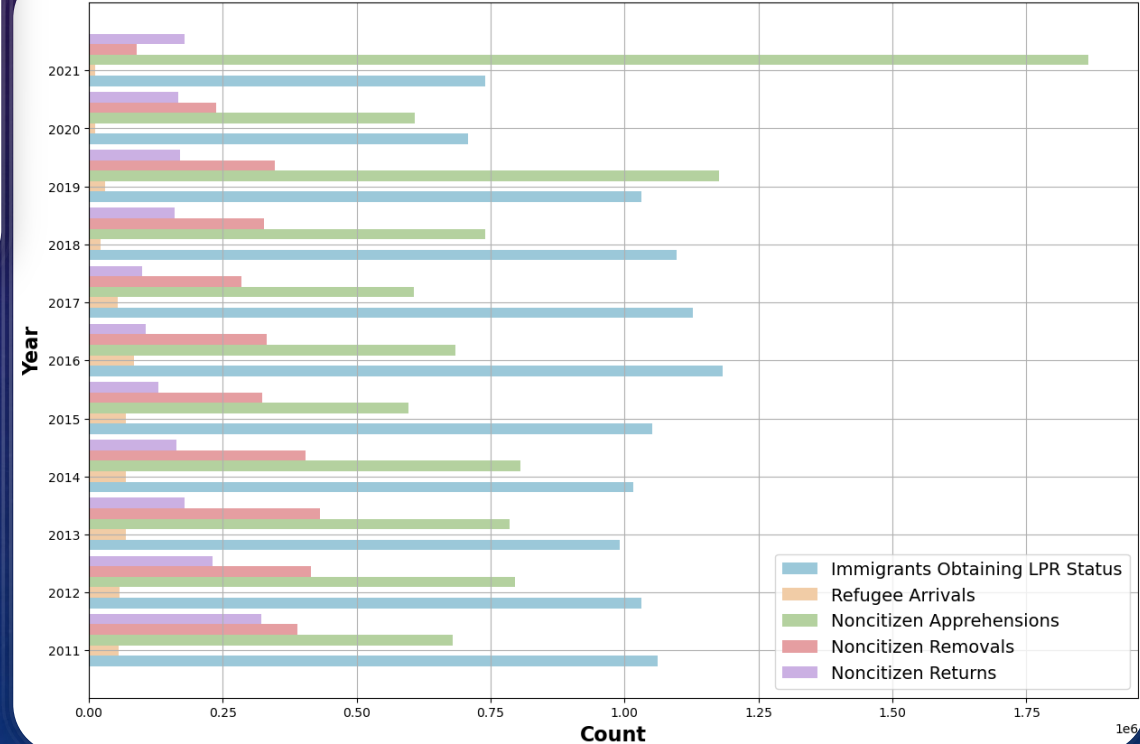

Figure 2:
Stem Plot, showing the **percentage** of each category of immigration in each year, the lower the smaller

Figure 3:
Bar Plot, showing that the number of **immigrants obtaining LPR status** and **noncitizen apprehensions** are **most significant** compared to the others.
